Thirty-four new wind turbines are replacing the 438 existing turbines along Vasco Road. These new wind turbines from NextEra Energy Resources (NextEra) will generate 150% more energy than the older ones.

VASCO WIND TURBINES

In compliance with the condition set forth by the Board of Supervisors, NextEra has started its safe-driving radio campaign. The Board wants to ensure that drivers continue safe practices by keeping their eyes on the road, and not on the construction project.

Vasco Road is a historically dangerous roadway. I have worked hard over the last seven years on improving driver safety.

The construction changes the landscape in that area. My goal is that those who travel that road are aware of the change, aware of the construction, and that they are slowing down and driving safely.

Construction is planned to be finished in November. The turbines will be generating power by the new year.
